

NAME _____
DATE _____

WU Day 2d

➤ **Graphs for Quantitative Variables**

1. The following data was obtained from the census website. Data on the household income for approximately 121 million households were collected. The mean income for this data set is \$69,677.

- (a) Is the histogram symmetric, left skewed or right skewed?
 - (b) Is the histogram unimodal, bimodal, or multimodal?
 - (c) Approximately how many households made more than \$50,000? What does this tell you about the median income?
 - (d) Is the mean income for 2011 higher or lower than the median income?
- (a) Which would be more appropriate description of center and spread for this data set: The mean and standard deviation or the 5-number summary? Why?

➤ **Describing Data with Numbers**

2. Below are survival times (in days) of 13 guinea pigs that were injected with a bacterial infection in a medical study:

91 83 84 79 91 93 95 97 97 111 101 105 98

- (b) Find the 5-number summary for this data set.
- (c) Draw a stemplot of the data and describe the shape of the distribution.
- (d) Are there any outliers in the data set above? Use the 1.5 IQR rule to check.
- (e) Which would be more appropriate description of center and spread for this data set: The mean and standard deviation or the 5-number summary? Why?

3. We have a class of 30 students and the data below shows the height (in cm) distribution of those people. The data has already been sorted from lowest to highest.

132	151	151	152	156	156	157	160	161	162
163	163	165	167	167	169	171	172	175	175
177	177	178	183	186	189	189	189	197	206

- (a) Find the 5-number summary for this data set.
- (b) Find the mode for this data set.
- (c) Are there any outliers in the data set above? Use the 1.5 IQR rule to check.
- (d) Draw a boxplot of the data.
